

GLOBAL MATH WEEK

PRESENTED BY  GLOBALMATHPROJECT

Dear teacher, principal or administrator,

Being confident about mathematics opens doors for students and paves the way for success in their chosen careers. Yet many students and adults have negative perceptions about mathematics.

Global Math Week 2018 has a goal of engaging ten million students around the world in learning about and discussing the same interactive mathematics topic together this October. The Global Math Week topic, Exploding Dots™, is an extraordinary gateway to remarkable connections between elementary mathematics and topics in algebra, calculus, and beyond. **Imagine the impact on our students of participating in this special event that illustrates the relevance and universality of mathematics.**

Will you help bring this astonishingly thrilling piece of mathematics to all our students?

I'm asking you to join in for Global Math Week 2018, October 10 - 17, devoting one day of math instruction to the topic of Exploding Dots™. Teachers will find it easy to prepare for the event by visiting the Global Math Week website and previewing the Exploding Dots™ materials.

Get started at <http://globalmathproject.org/>.

Sincerely,

*A Mathematical Journey from
Arithmetic to the Infinite*
